COP 4834 Web Systems II

Assignment 13: User Documentation

Professor Dr. Ron Eaglin

Assignment:

We are going to create end-user documentation for my system. The documentation should have a section of what should be done and lead the user through the steps. Then we should make sure that the tasks are easy to find for the users.

Title: User Documentation

Objective:

Write useful end-user documentation for your project

User Tasks:

1. Create a user
2. Log in
3. View Users
4. Edit a user
5. Delete a user

The following documentation provides step-by-step instructions for how to use the User Management Application I created. This system will allow the user to create accounts, log in, edit and manage all the information. Administrative users will have extra privileges such as editing user information and deleting the users.

System Requirements:

- Web browser
- Internet Connection
- Access to the application

<https://75968ed4-45fc-4e8f-9300-62f558534c95-00-u6irm8211c81.riker.replit.dev/>

How to access the system:

1. Open a web browser (Ex: Google Chrome, Safari)
2. Enter the application URL
3. Press Enter

4. The login screen should appear

Task 1: Create a User

Steps:

1. Open the application homepage
2. Locate the “Create User” button
3. Enter a username/ email address
4. Enter a password
5. Choose a role level
6. Click create user

Expected Result:

- A new user will be added to the system
- The new user will appear in the registered user list

Task 2: Log in

Steps:

1. Navigate to the log in page
2. Enter the users email and password
3. Click the log in button

Expected Result:

- The user is logged in successfully
- The user will now be able to view the dashboard

Task 3: View Users

Steps:

1. Log into the system
2. Navigate to the registered users list

Expected Result:

- The user should be able to see any of the other registered users

Task 4: Edit a User

Steps:

1. Log into the system under admin credentials

2. Locate the specific user in the registered user list
3. Click the edit icon
4. Modify what user information is necessary
5. Click the “Save Changes” button

Expected Result:

- The new and updated user information is shown

Task 5: Delete a User

Steps:

1. Log in under admin credentials
2. Locate the specific user
3. Click the delete icon

Expected Result:

- The user is removed from the registered user list

Task 6: Role-Based Access

Steps:

1. Log in under admin credentials
2. Click the edit or create user option
3. Click the drop down menu for the specified role for that user
4. Choose which user role is necessary

Expected Result:

- The user will have that specific role loaded for them when they are shown on the registered user list

Common Issues:

Problem: “Failed to load users”

Solution: Refresh the page and check the connection to the server

Problem: “Failed to update user”

Solution: Ensure all the necessary fields are entered and refresh the page and try again

Tips for users:

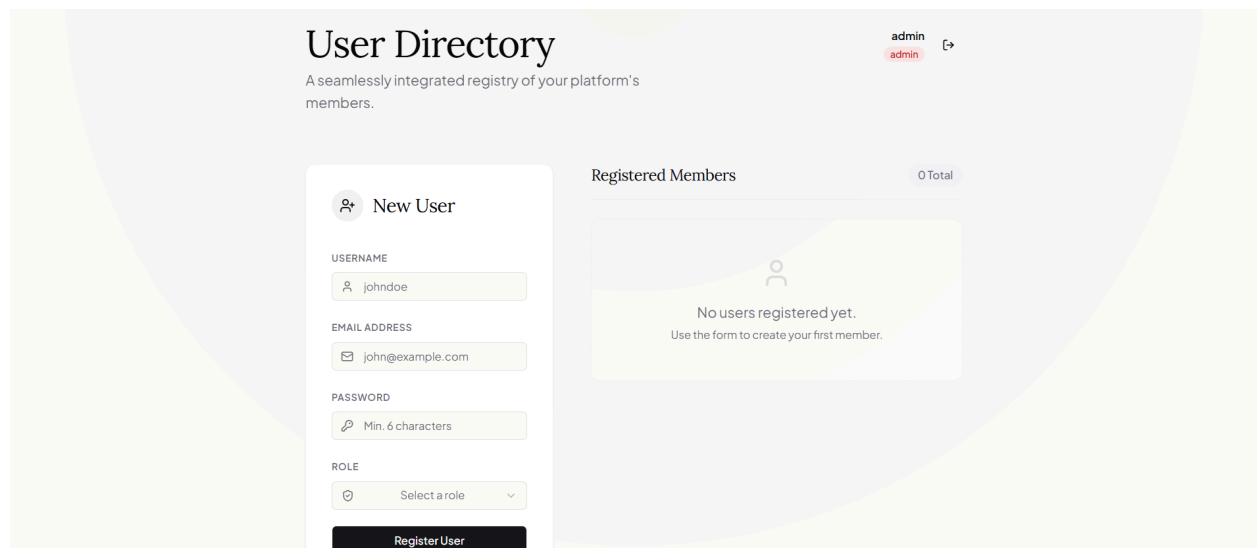

- Use strong passwords
- Do not attempt to refresh application during updates
- Admin users should monitor their permissions

Conclusion:

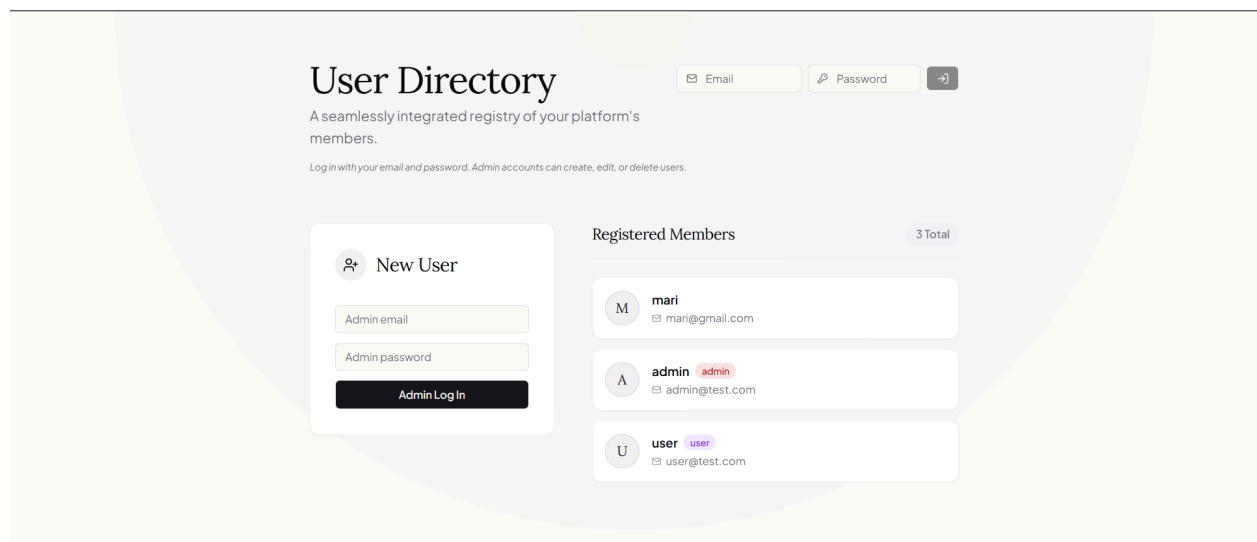

This application provides a simple and efficient way of managing users. The following steps in the guide will help any user navigate through the application successfully.
